

DESCRIPTION

The HT Access Harness is a rope access harness that gives the user a high degree of mobility. This harness has:

- 2 silver coloured fall arrest attachment points (dorsal and sternal),
- 2 work positioning points on either side of the belt and an umbilical suspension point. All three are blue in colour.

The high wearing comfort of the HT Access harness is based on its overall design as well as the Y-Pad comfort backrest, the high-density, anti-perspiration foam belt and the mountain-type comfort leg straps.

Mobility is ensured by the harness structure where the shoulder straps come together to lock onto the user's sternum, combined with the low weight of the harness.

The HT Access harness comes standard with self-closing adjustment buckles on the leg straps and on the left shoulder strap.

Accessories for this harness include the work seat and rope accessory: ascender handle, sternal ascent rope clamp lock, LSD Jumar lanyard and ascender pedal.

TECHNICAL CHARACTERISTICS

Front view
